Your Local representative is:

MixPro® Agitators is quickly being recognized for our technical expertise and ability to provide quality custom engineered mixing solutions to the Pulp and Paper, Chemical Processing and Mining Industries. Our belief is that every Mixing Application is unique and should receive the individual attention which leads to an innovative, competitive solution.

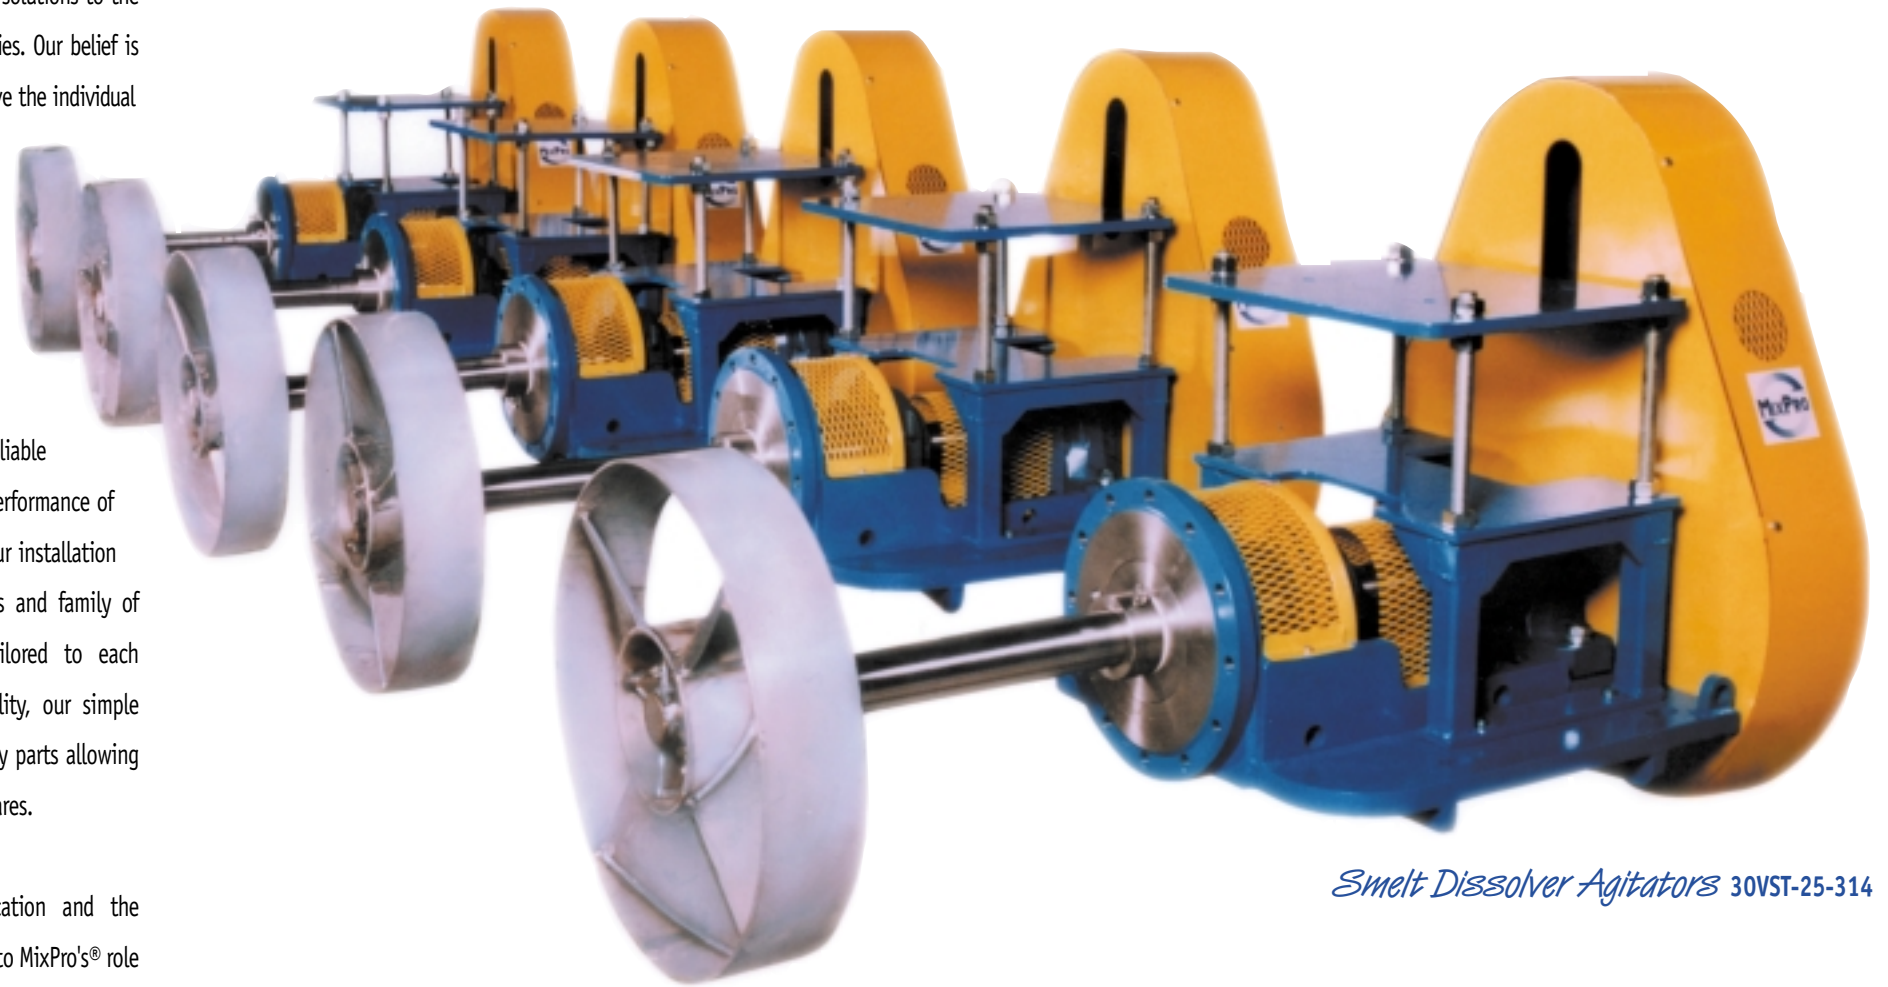

Expertise Integrity

Our success to date has been largely due to the

reliable performance of our installation

base, due in part to our flex protected drive systems and family of process matched hydrofoil impellers, specifically tailored to each application. With emphasis on maintenance and quality, our simple robust mechanical designs utilize mostly non-proprietary parts allowing our customers the freedom to outsource aftermarket spares.

Problem solving, innovative designs, custom fabrication and the utilization of proven hydrofoil technology all contribute to MixPro's® role as a preferred supplier in the mixing industries.
